

Anti Spatter is our CFC free weld spatter release agent that is used as an anti-adhesion preparation in your welding process. Anti spatter is stick and MIG process compatible, non fuming.

Applications:

Anti Spatter is used on all metals in both SMAW and GMAW welding processes. Spray welding gun and workpieces before welding to prevent stoppages in your liner and to improve spatter-release. The film applied has an oily character, is non-toxic and can withstand the temperatures of normal operation. Anti Spatter has no negative effects to the weld, the welding process and the composition of the weld metal.

Directions for usage:

Hold the can upright and apply a thin, just visible, film from a distance of 30 cm to the workpiece. Please be aware that the can is pressurized, avoid usage at temperature > 50°C, store away from direct sunlight, do not puncture or increase the can even when empty, keep the can away from direct heat. Do not spray in open fire, flames or red-hot metal sheets. Use Anti Spatter in a well ventilated area.
